Purpose of Contact: Agreement to remediate the fill material overlying Trench 7

Discussion

As agreed to in the meeting on November 10, 2004, the fill material that covers Trench 7 is contaminated with very low levels of radionuclides that are above action levels at two locations. Therefore, the fill material at each hotspot will be remediated as required to meet the action levels.

Confirmation samples will be collected in accordance with the IABZSAP. One sample will be collected from each of the four excavation walls and one from the bottom of the trench. Side wall samples will be representative of the entire interval where contamination was detected.

The contents of Trench 7 will not be disturbed. The remedial action is only for the material that was used to cover the contents of the trench.
